

Learnpoints

ADAPTIVE LEARNING COURSEWARE

Riptide Elements® clients are educators and instructional designers who use our technology product line to make their distance learning programs more accessible and take the learner's experience to the "next level." **Riptide Learnpoints™** allows the combining of modern concepts like adaptive learning, gamification, interactive video, advanced assessment strategies, badging and achievements, and more.

Learnpoints™ is an extremely sophisticated interactive multimedia instruction (IMI) courseware engineered to work on "any device" in "any language." The courseware provides the flexibility to create engaging distance learning, has strategies for emerging technologies, and supports the growing variety of modern learner process flows that begin with foundational instructional science pedagogies and andragogies.

Features

Any Device

Learnpoints is device agnostic. Deliver distance learning content to any smart device: mobile, tablet, or computer, Windows, Apple, Android, Blackberry, Kindle, and more.

Interactive Multimedia Instruction

All 3 levels of IMI are enabled in Learnpoints including gamification, video, audio, interactive activities, quizzes, and more.

Any Language

By design, all of the Learnpoints application and content language can be extracted and easily translated. Learning activities and media can be configured to deliver regional and language specific content. Every digitally available language character set is supported including right reading Arabic.

Advanced Learning Analytics with xAPI

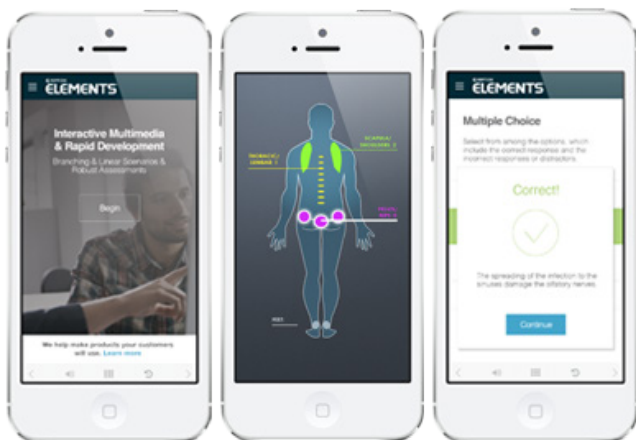

Powered by the Experience API (xAPI), Learnpoints courseware is natively enabled to report detailed activity streams to a Learning Record Store (LRS). Take your learning evaluation beyond completions and scores, track competencies, connect learning to performance, and understand learner engagement and behavior. Riptide is part of the workgroup that created the Experience API (xAPI) and Learning Record Store (LRS) specification.

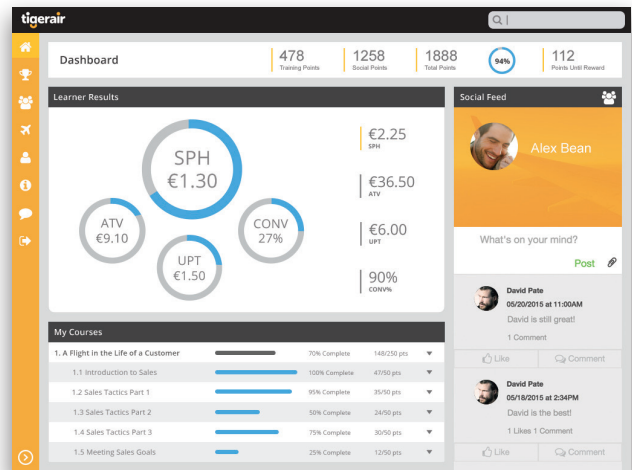

Assessments, Disclosures, Attestations, and Surveys

All forms of digital assessment strategies, process flows, and compliance tracking are supported. Question pool(s) keep track of each question or assessment activity with unique identifiers which can reference the originating learning content within or outside of Learnpoints. Learnpoints may be used as an assessment tool, to survey learners, record attestations, and capture and record disclosures.

Adaptive Learning

Create rules based on xAPI activity stream processing of data to adapt learning to the individual's needs, intervene at point of learner need or automate tutoring rules. Use configuration rules to provide A/B testing of learning concepts within the same courseware and audience.

Admin & Learner Portals

Upon Request, Learnpoints can be configured to provide seamless Learner/Administrator portals with integrated portal views into an LMS or other enterprise systems.

- All authentication strategies are available to implement.
- Administrators can create classes and assign content to users.
- Administrators can track behavior in training and competencies.
- Learners can track their overall progress, see assignments, classes, and courses available for to them to take.

Additional Features

Course Conversion

Convert legacy coursewares to Learnpoints such as Flash, Captivate, Articulate, PPT, and more.

Configuration Options

A configuration interface can provide the ability to change and update portions of each course title to support multiple clients or locations.

Certificates

Learnpoints uses server side technology to generate PDF Certificates that can be printed, emailed to users, stored in an LRS, and/or sent to a system of record.

Custom Branding Support

Brandmark and corporate colors can be changed in courseware configuration which can be added to the course content dynamically. This allows for multiple audiences to be served with the same learning content.

Seamless LMS Integration

Launch Learnpoints courses directly from your LMS.

Authentication/Authorization

Learnpoints can connect to any "source of truth" services within the enterprise ecosystem and all forms of authentication can be supported (SAML, Oath etc).

Business Intelligence

Use our data streams for your Business Intelligence (BI) tools or implement our BI software that allows analysts to mine data, and distribute reports and data visualizations.

Legacy SCORM/AICC Support

Riptide Elements products are proven to be 100% backwards compatible and are currently reporting SCORM/AICC for multiple client LMS's.

Minimum System Requirements:

Browsers:

- IE11 and Above
- Safari: Version 9 and above
- Firefox: Latest version
- Google Chrome: Latest version

* Chrome and Firefox have auto-updaters.
Most machines will be on the current version of these browsers.

Learnpoints is part of the Riptide Elements® learning technology product line, recognized in 2015 & 2016 by Brandon Hall Group as a "Best Advance in Learning Management Technology."
