

Storepoints

LEARNING RECORD STORE

Riptide Elements® clients use our technology product line to collect and provide better learning analytics to prove the effectiveness and value of their learning programs.

Storepoints™ Learning Record Store (LRS) powered by the Experience API (xAPI) provides Learning & Development leaders with summative and formative evaluation data, learning engagement metrics, and learning activity streams from anything digital, anywhere. With Storepoints LRS as your learning technology foundation you are ready for today and for the future of learning. You can begin to map-training-to-performance, perform predictive analysis, implement intelligent/automated tutoring, create adaptive training, and more.

Features

Track Learning Everywhere

All types of digital activity can be tracked wherever and whenever it happens with xAPI, including: eLearning, self-directed, blended, microlearning, internal business portals and apps, and anything with an activity stream (IOT sensors, VR, simulators, etc.) or even ILT with digital check-ins and assessments.

Reporting & Analytics Dashboards

Storepoints comes with default reporting capabilities out of the box. In addition to having access to complete xAPI activity streams, basic reporting like total completions, elapsed time, pass/fail rate per question, and more can be included.

Portability

Storepoints LRS has current implementations in the cloud (AWS, Azure, etc.), AWS GovCloud, private cloud, and installed onsite on location.

Backwards Compatible

Storepoints is proven to be 100% backwards compatible and is currently reporting AICC/SCORM for multiple client LMS's.

100% Enterprise Integration Success Rate

Storepoints has never met an enterprise system it couldn't connect to. Storepoints is source of truth agnostic when working within a complex ecosystem including with LMS, HRIS, TMS, PMS, BI and other enterprise systems.

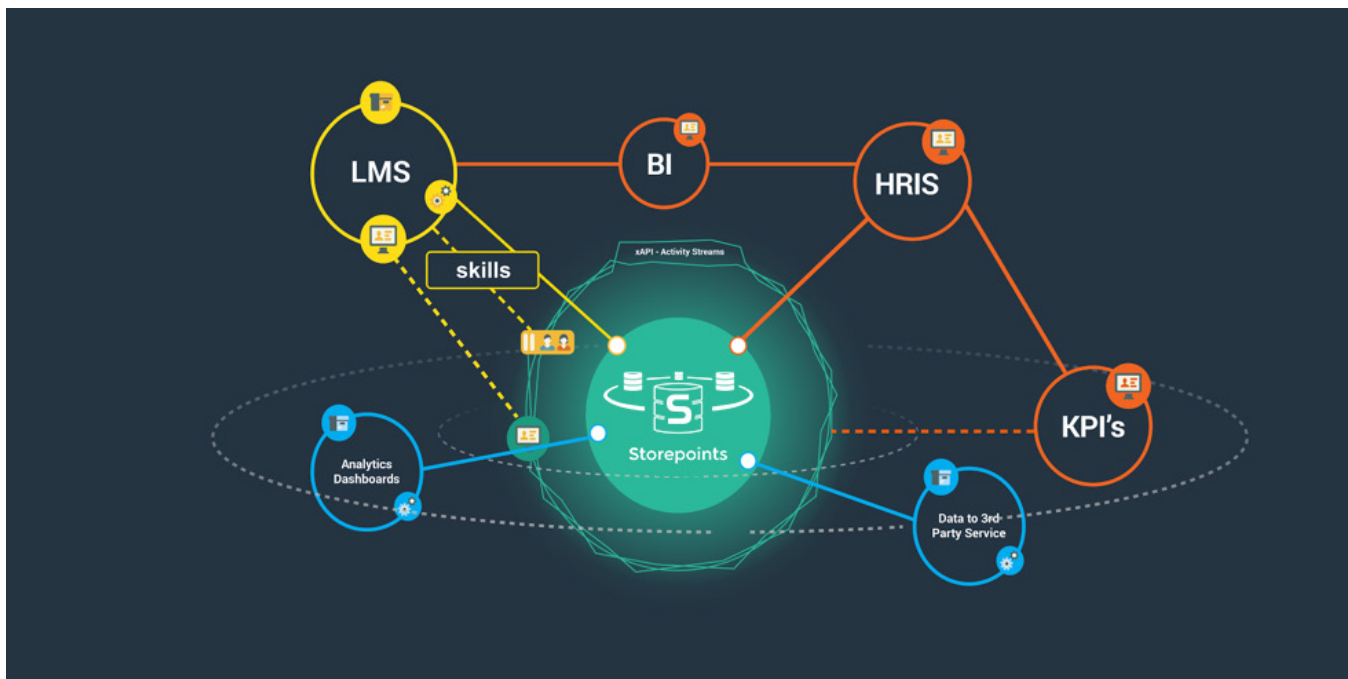

Data Streams

Storepoints LRS goes beyond the xAPI specification and supports OLTP, OLAP, and modern data subscription techniques.

Business Intelligence

Use Storepoints data streams for your Business Intelligence (BI) tools or implement our BI software that allows analysts to mine data and distribute reports and data visualizations to stakeholders. Storepoints allows you to directly connect learning to performance.

Above: Concept of Operations with Storepoints LRS integrating to an LMS, HRIS, BI, and 3rd Party Services

Storepoints LRS can integrate seamlessly with other enterprise systems including: LMS, HRIS, TMS, PMS, Microlearning, Knowledge Apps, Internal Business Apps or Portals, 3rd Party Services, and more.

Admin & Learner Portals

Upon Request, Waypoints can be configured to provide seamless Learner/Administrator portals with integrated portal views into an LMS or other enterprise systems.

- All authentication strategies are available to implement.
- Administrators can create classes and assign content to users.
- Administrators can track behavior in training and competencies.
- Learners can track their overall progress, see assignments, classes, and courses available for to them to take.

Adaptive Learning

Create rules based on xAPI activity data in Storepoints to adapt training to the individual's needs, intervene at point of learner need, or automate tutoring rules.

Ad Hoc Querying

Write direct LRS queries to inform adaptive rule-making.

xAPI Stream Processing

Dynamic rules applied to xAPI activity streams.

Storepoints is part of the Riptide Elements® learning technology product line, recognized in 2015 & 2016 by Brandon Hall Group as a “Best Advance in Learning Management Technology.”
